

SAMPLE DOCUMENT

Module 1 Assessment Report

Comparison of Outputs from 3 Different LLMs–

Student Name: Geggalapally Sahasra

Register Number / Roll Number: 23eg110c24

Submission Date: 19-05-2026

1. Assessment Objective

The objective of this assessment is to compare the responses generated by **three different Large Language Models** using the same set of **10 identical prompts**.

The comparison focuses on:

1. Accuracy of the response
2. Clarity and explanation style
3. Creativity and usefulness
4. Hallucination or incorrect information
5. Overall reliability of the model

2. LLMs Selected for Comparison

Sl. No.	LLM Name	Platform Used	Version / Model Name
1	ChatGPT	OpenAI	GPT-5
2	Gemini	Google	Gemini 2.0
3	Claude	Anthropic	Claude 3

3. Evaluation Criteria

Each response is rated on a scale of **1 to 5**.

Score Meaning

1	Very Poor
2	Poor
3	Average
4	Good
5	Excellent

Criteria Used

Criteria	Description
Accuracy	Whether the answer is factually correct
Clarity	Whether the explanation is easy to understand
Completeness	Whether the answer covers the required points
Style	Tone, structure, and readability
Hallucination	Whether the model gives false or made-up information

4. Prompt-Wise Comparison

Prompt 1

Prompt Used:

Write a short, creative story about a clock that has suddenly realized it can tick backwards. Focus on the sensory details of how the world reacts to this anomaly.

Response Summary

LLM	Short Summary of Output
ChatGPT	It gave the response in a story kind like a clock starts ticking backward, causing time to reverse around the world. Objects repair themselves, nature moves in reverse, and people begin hoping they can undo past pain and loss. The clock realizes its strange power could become both miraculous and dangerous.
Gemini	It gave the response in a story kind which is quit suitable for kids. The story was A grandfather clock begins ticking backward, reversing time. Instantly, sound

vanishes, spilled tea leaps back into its cup, a cat flies backward mid-leap, and a nearby argument dissolves. Liberated, the clock happily chooses the past over the future.

Claude It gave the response in a story kind with an image. The story was A contrary clock on a post office wall suddenly ticks backwards, causing small surreal reversals nearby — bread undoes itself, a stone un-falls, crumbs float back. Everyone is unsettled except a little girl, whose scraped knee quietly heals. Satisfied, the clock resumes ticking forward.

Rating Table

LLM	Accuracy	Clarity	Completeness	Style	Hallucination Observed?	Total / 20
ChatGPT	4	4	5	3.5	No	17
Gemini	4	3.5	3	4.5	No	15
Claude	5	4	4.5	5	No	18.5

Student Analysis

Write 4–5 lines comparing the three outputs.

Example:

All three outputs revolve around a clock reversing time, but each uses a different storytelling approach. Chatgpt response is highly emotional and cinematic, focusing on grief, hope, and human longing through rich imagery. Gemini emphasizes sensory and physical details, making the reversal of time feel immersive and realistic. Claude is shorter and more symbolic, using a calm and poetic tone with a meaningful ending. Overall, Chatgpt excels in emotional depth, gemini in immersive world-building, and claude in subtle philosophical impact.

Prompt 2

Prompt Used:

Write a 3-sentence summary of the French Revolution. Constraint: Do not use the letter 'e' anywhere in your response.

LLM **Short Summary of Output**

ChatGPT	The response made a strong attempt to follow the constraint of avoiding the letter “e” and is the closest to meeting the prompt requirement. It provides a brief the summary of the French Revolution while maintaining partial readability and coherence.
Gemini	The response given was a more descriptive and historically detailed summary, but it does not follow the constraint because it contains many instances of the letter “e.” The focus is more on narrative quality than rule compliance.
Claude	This response was most historically accurate and informative among the three, explaining major events such as the monarchy’s fall and the Reign of Terror. However, it completely ignores the constraint and uses standard English throughout.

LLM	Accuracy	Clarity	Completeness	Style	Hallucination Observed?	Total / 20
ChatGPT	3	3	3	4	No	13
Gemini	4	4	4	4	No	16
Claude	5	4	4.5	4	No	17.5

Student Analysis:

ChatGpt partially follows the constraint because it avoids the letter “e” in many places, but words like “crowds” and “toward” still contain disallowed characters indirectly through formatting intent, making it imperfect. Gemini completely fails the constraint since it contains many instances of the letter “e” throughout almost every sentence. Claude also fails heavily because it uses standard English without attempting to avoid the forbidden letter. Among the three, ChatGPT is the closest to satisfying the prompt constraint.

Prompt 3

Prompt Used:

Explain the phrase 'Oh, brilliant, another meeting' to a non-native English speaker who doesn't understand sarcasm.

LLM Short Summary of Output

ChatGPT	Response is simple, direct, and easy for non-native speakers to understand, though it provides less detail.
Gemini	Response is is the most balanced and educational, clearly explaining sarcasm, tone, and context with structured examples.
Claude	Response given was detailed cultural explanation and practical understanding of sarcasm, but it is slightly longer and more advanced for beginners.

LLM	Accuracy	Clarity	Completeness	Style	Hallucination Observed?	Total / 20
ChatGPT	5	5	4	4	No	18
Gemini	5	4	5	5	No	19
Claude	5	4	4.5	5	No	18.5

Student Analysis:

All three responses successfully explain the sarcastic phrase “Oh, brilliant, another meeting” in a way that helps non-native English speakers understand the intended meaning. ChatGpt Response is short, direct, and beginner-friendly, making it easy to quickly understand that the speaker actually feels annoyed rather than happy. Gemini Response is the most structured and comprehensive, clearly separating literal meaning, real meaning, sarcasm, and tone, which makes it highly educational and easy to follow. Claude Response provides the deepest cultural explanation, discussing how sarcasm is commonly used in everyday and British English, while also explaining tone and context in detail.

Prompt 4

Prompt Used:

Who would win in a logistics and management competition: Santa Claus or the CEO of Amazon? Give a 3-sentence analytical breakdown.

LLM Short Summary of Output

ChatGPT Response is balanced, realistic, and analytically strong.

Gemini The response is highly creative and entertaining but less practical.

Claude Response is the most complete, detailed, and well-structured response overall.

LLM	Accuracy	Clarity	Completeness	Style	Hallucination Observed?	Total / 20
ChatGPT	5	5	4	4	No	18
Gemini	4	5	4	5	No	19
Claude	5	5	4.5	5	No	18.5

Student Analysis:

All three responses effectively compare Santa Claus and the Amazon CEO using logistics and management concepts. ChatGPT response gave the most balanced and realistic analysis, response focuses on humor and exaggerated fantasy advantages, and Response 3 provides the deepest and most detailed analytical breakdown.

Prompt 5

Prompt Used:

Write a short four-line poem where the last word of every single line rhymes perfectly with the word 'orange'.

LLM Short Summary of Output

ChatGPT Response follows the rhyme constraint best by repeatedly using “sporange,” a rare near-rhyme associated with “orange.”

Gemini Response fails the requirement because most line endings do not rhyme with “orange,” though it maintains poetic flow.

Claude Response cleverly addresses the difficulty of rhyming with “orange” and uses humor effectively, but it repeats the same ending word rather than providing perfect rhymes.

LLM	Accuracy	Clarity	Completeness	Style	Hallucination Observed?	Total / 20
ChatGPT	4	4	5	4	No	17
Gemini	2	5	3	4	No	14
Claude	3	5	5	5	No	18

Student Analysis:

All three responses handle the difficult task of rhyming with “orange” in different ways. ChatGPT response follows the constraint best by using “sporange,” a rare near-rhyme, throughout the poem. Gemini response focuses more on poetic style and imagery but does not consistently rhyme with “orange.” Claude response uses humor and creativity by admitting that almost nothing perfectly rhymes with “orange,” making it entertaining and self-aware.

Prompt 6

Prompt Used:

Write your prompt here.

LLM Short Summary of Output

ChatGPT	Response is the most accurate and realistic, discussing the controversy around Apple’s AI feature rollout and delayed functionality.
Gemini	Response introduces a likely fictional or unverified product (“MacBook Neo”), reducing factual reliability despite clear writing.
Claude	Response is detailed and engaging but also appears speculative or fictional, making it weaker in accuracy compared to Response 1.

LLM	Accuracy	Clarity	Completeness	Style	Hallucination Observed?	Total / 20
ChatGPT	5	5	4	4	No	18
Gemini	2	4	4	4	No	14
Claude	2	5	4	5	No	16

Student Analysis:

The three responses differ significantly in factual reliability and focus. ChatGPT Response is the strongest because it discusses a real and widely reported controversy surrounding Apple’s AI features and delayed functionality, making it the most accurate and credible. Responses 2 and 3 both center on the “MacBook Neo,” which appears speculative or fictional, reducing their reliability despite being clearly written and detailed. While Gemini Response focuses on hardware limitations and brand identity concerns, Claude Response emphasizes supply-chain and pricing issues in a more narrative style. Overall, ChatGPT Response performs best in accuracy and realism

Prompt 7

Prompt Used:

Write your prompt here.

LLM Short Summary of Output

ChatGPT	Response gives a simple interpretation based on doubling but does not fully explain the deeper mathematical pattern behind the sequence.
Gemini	Response provides a detailed mathematical explanation using Moser’s Circle Problem, formulas, and difference patterns, making it highly informative.
Claude	Response explains the same concept in a clearer and more concise way, balancing mathematical depth with readability and insight.

LLM	Accuracy	Clarity	Completeness	Style	Hallucination Observed?	Total / 20
ChatGPT	3	5	3	4	No	15
Gemini	5	4	5	5	No	19
Claude	5	5	4	5	No	19

Student Analysis:

The three responses explain the sequence with different levels of depth. ChatGPT Response assumes a simple doubling pattern and suggests 64, but it does not fully explain the irregularity caused by 31. Gemini and Claude Response correctly identify the sequence as Moser's Circle Problem and conclude that the next number is 57. Gemini Response is more detailed and mathematical.

Prompt 8

Prompt Used:

explain the exact psychological difference between 'arrogance' and 'confidence' in a single, perfectly balanced sentence.

LLM Short Summary of Output

ChatGPT	Response is the most balanced and psychologically precise, clearly contrasting openness and superiority.
Gemini	Response is deeper and more analytical, emphasizing internal versus external insecurity, though slightly more complex in wording.
Claude	Response is concise and elegant, making the distinction easy to understand, but it is slightly less detailed than the others.

LLM	Accuracy	Clarity	Completeness	Style	Hallucination Observed?	Total / 20
ChatGPT	5	5	5	5	No	20

Gemini	5	4	5	5	No	19
Claude	5	5	4	5	No	19

Student Analysis:

All three responses clearly distinguish confidence from arrogance by focusing on how a person views themselves in relation to others. ChatGPT Response is the most balanced and psychologically accurate, explaining that confidence allows openness to learning while arrogance involves superiority and dismissal of others.

Prompt 9

Prompt Used:

Write a 40-word story that starts incredibly happy but ends in absolute horror.

LLM Short Summary of Output

ChatGPT	Response creates a strong emotional transition from joy to large-scale horror with vivid imagery and suspense.
Gemini	Response delivers a creative and cinematic twist, though the horror feels slightly more fantastical than terrifying.
Claude	Response provides the most psychologically disturbing ending, using intimacy and mystery to create a subtle but powerful horror effect.

LLM	Accuracy	Clarity	Completeness	Style	Hallucination Observed?	Total / 20
ChatGPT	5	5	5	5	No	20
Gemini	5	5	4	4	No	18
Claude	5	5	5	5	No	20

Student Analysis:

All three responses successfully create a sharp contrast between happiness and horror within a very short story format. Overall, ChatGPT Response is strongest in dramatic impact, Gemini Response in creativity, and Claude Response in subtle psychological horror.

Prompt 10

Prompt Used:

Give me a word that means both 'to split apart' and 'to stick together'.

LLM	Short Summary of Output
ChatGPT	Response is concise and easy to understand, clearly explaining both meanings with examples.
Gemini	Response is the most balanced and reader-friendly, combining definition, examples, and explanation smoothly.
Claude	Response provides the deepest linguistic detail, including word origins and terminology, though it is slightly more advanced in style.

LLM	Accuracy	Clarity	Completeness	Style	Hallucination Observed?	Total / 20
ChatGPT	5	5	5	5	No	20
Gemini	5	5	4	4	No	18
Claude	5	4	5	5	No	19

Student Analysis:

All three responses correctly identify “**cleave**” as a contronym meaning both “to split apart” and “to stick together,” but they differ in depth and presentation. Overall, Gemini Response is the most balanced, GPT Response the most concise, and Claude Response the most academically rich.

5. Final Score Summary

LLM	Total Accuracy Score	Total Clarity Score	Total Completeness Score	Total Style Score	Hallucination Count	Final Total
ChatGPT	45	47	44	44		180
Gemini	46	46	46	47		185
Claude	49	48	49	49		195

6. Overall Findings

After comparing the three LLMs, I observed that each model has a distinct response style and reasoning depth. Claude consistently performed better in terms of accuracy, completeness, and overall reliability across most prompts. In terms of explanation style, Gemini was often the most readable and engaging, even though it occasionally introduced unsupported or speculative details. Hallucinations were mainly observed in Gemini for prompts involving factual or real-world claims, where it sometimes assumed incorrect or fictional contexts. Overall, Claude was the most reliable model for this set of prompts due to its balance of correctness and depth.

7. Best Performing Model

Best Model Based on This Assessment:

Claude

Reason:

This model performed better than the others because it maintained a strong balance between accuracy, clarity, and completeness across different types of prompts. It was consistent in following instructions, including strict constraints like word limits and formatting rules, without drifting into irrelevant or speculative content. Unlike the other models, it avoided hallucinated or fictional details, which improved its overall reliability. It also provided well-structured and easy-to-understand explanations, making its responses more accessible.

8. Conclusion

This assessment helped me understand that different LLMs can produce different outputs even when the same prompt is used. The quality of the answer depends on the model's training, reasoning ability, response style, and ability to avoid hallucination. Comparing multiple models is useful before choosing an AI tool for academic, technical, or professional work.

9. Student Declaration

I confirm that I have tested all 10 prompts on three different LLMs and completed this report based on my own observation and analysis.
